| N | <0.05 | | | |

The requirements of ISO Guides 30, 31, and 35 were followed for the preparation of this setting-up sample and data sheet.

Homogeneity: This setting-up sample (SUS) was tested for homogeneity using ASTM Standard Method E 826 and found acceptable. It was also examined by spark atomic emission spectrometry and found to be compatible with the following Reference Materials — BAS 409, 453/1; BS HON T, 54E, 56H, 1018, 2001, 2931, 2931B; DSZU CA013; LECO 502-870; SRM 19H, 291.

Data Sheet Number SU 1018F-111820 Page 1/3

¹ The above chemistry is supplied as an approximate guide to the composition of this setup sample and must not be regarded as a certified analysis. The analysis is based on the results of the homogeneity testing performed on the sample lot. This sample was found to be suitable for use as a setting-up sample and may be used for instrument drift control. It must not be used for instrument calibration.

<u>Validity statement:</u> ISO Guide 31 states that the data sheet should contain an expiration date for all samples where instability has been demonstrated or is considered possible, after which the stated values are no longer guaranteed by the producing body. The stated values for BS SU 1018F are valid indefinitely. However, they are nullified if this SUS is damaged, contaminated, or otherwise modified.

Storage: This CRM must be stored in a cool, dry, non-corrosive environment.

Source: The bar stock for this SUS was produced by Nucor Cold Finish Wisconsin; Oak Creek, WI.

<u>Form:</u> This SUS is machined in the form of a disc, approximately 38mm in diameter and 150mm thick by Brammer Standard Company, Inc.

<u>Use:</u> This SUS is intended for use in spark atomic emission and x-ray spectrometric methods of analysis. Refer to ISO Guide 33 for information about the use of setting-up samples. It is intended as a setup standard to be used for controlling instrument drift.

Analytical Area: The entire depth of the SUS may be used.

Caution: As with any bar sample, avoid spark atomic emission spectrometric burns in the center of the SUS (5 mm radius), as some segregation may be present.

<u>Sample Preparation:</u> For best analytical results, use the same method for preparing the analytical surface on all setting-up samples as you use for production specimens. Avoid overheating the sample during surface preparation.

Caution: SUS contains significant insoluble soft metal inclusions. Surface smearing may occur. Spark atomic emission spectrometers may require extended preburns to compensate.

<u>Data Sheet Number:</u> The unique identification number for this data sheet is SU 1018F-111820. You may obtain information on revisions of data sheets from the internet at <u>www.brammerstandard.com</u>.

<u>Safety Notice:</u> A Material Safety Data Sheet (MSDS) is not required for this sample. This sample will not release or otherwise result in exposure to a hazardous chemical, under normal conditions of use. Inquiries concerning this setting-up sample should be directed to:

Brammer Standard Co., Inc. Phone: (281) 440-9396 Web: www.brammerstandard.com
