Zr - Zirconium [58](#)

Data and Symbols: The # symbol indicates the class of the material, where 1 = CRM, 2 = RM, and 3 = TYPE. The TYPE classification is for samples that are certified with the given chemistries, but there are no uncertainties on the certificates. Values shown in (parenthesis) are informational and not certified. The letter "i" may appear in the data, indicating the certified value will be very close to the stated target - this is except for samples with part numbers beginning with AL, for these the "i" is indicating that for an extra fee this value can be certified. All values are listed in mass (or weight) percent unless otherwise noted.

Sample forms: As most samples are discs and not blocks, the unit sizes given indicating first diameter and then height. Blocks will be indicated by showing a third dimension. A few are mushroom type and indicated as well. In the later pages D and M are used to distinguish between mushroom and disc. The letter "c" indicates cast, "H" H.I.P., and "w" wrought.

Aluminum by Grade: Beginning on the next page, and with a summer 2017 addendum near the end of this catalog, please find the world's supply of graded aluminum CRMs. Under the GRADE heading you may see an M, which indicates a modified version of the grade. To simplify these listings, I did not detail some certified trace elements data. Samples that have certified data for these elements will indicate this by showing the element under the Comment section. To find this information, one may use the "SEARCH" function of Adobe Reader to find the sample's complete listing in the second half of this catalog - or use our website database where you can quickly search by any criteria. Only about 55% of the total samples have assigned grades, the rest are in the later pages.

Aluminum by Type: Please browse this second half of the catalog using the linked index above. Herein you will find the current and complete global supply of aluminum CRMs sorted into groups. These samples will be further sorted by the element of interest, indicated in bold type. The section lists graded samples from the first section along with all others currently available.

Aluminum Sets: These samples are available in sets only. Grouped under the heading SET or SETS, member samples are not available individually.

Help is Available: If you require any further information or research, we remain eager to assist.

Thank you and best regards,

Beau Brammer
